

Stunning garden re-design enhanced by DriveDash Overlay Surfacing System

We were delighted to receive images of a recent project one of our customers had been responsible for...

Evergreen Services used our golden aggregate for the DriveDash resin bonded areas of around 475m² of driveway areas as well as incorporating the same into elements of the garden.

Congratulations to all at Evergreen Services for a stunning result!

Our thanks to Evergreen Services for supplying, and allowing the use of, these images. www.evergreenservicesuk.com

Why DriveDash™?

DriveDash™ can be laid over a wide variety of materials to create a natural, aesthetically pleasing, hard wearing and maintenance-free surface. With a variety of aggregate colours available, its feel and appearance is particularly suited to heritage and older properties.

The beauty of DriveDash™ is the simplicity and diversity as it is widely and successfully used on large and small driveways, paths, access roads, landscaping schemes and within the leisure industry. Many customers have rejuvenated dull, uninspiring areas at a fraction of the cost of more traditional methods.

Laid over existing or new concrete, asphalt or macadam based surfaces, DriveDash™ is a surface dressing which can be applied to renovate unsightly but structurally sound areas resulting in a gravel driveway without the normally associated disadvantages.
